

Abstract

The present invention relates to a water filter device, said device comprising a container (1) that has an opening for filling of water, and a filter unit (3) that is movable
5 relative to the container (1).

It is significant of the device according to the present invention that the filter unit (3) comprising a filter element (5), an operating rod (7) connected to the filter element (5) and sealing means (14) along the periphery of the filter
10 element (5), and that the filter element (5) comprises a particle filter (10) and an adsorption filter (11).
